Easter Parade

MOST UNUSUAL HIGHLY COLORED ROSE EVER OFFERED!

It is truly remarkable to watch this glorious floribunda go through such an amazing transition of colors. At first the buds are bright golden yellow. Then, while opening, the upperside of the petals becomes edged with salmon pink and cerise, remaining yellow on the underside. And finally, in all of its 50 to 55 petaled glory, Easter Parade emerges a gorgeous light crimson rose with delicate yellow tonings, beautifully complemented by its shiny, vigorous dark green foliage.

GERMAIN'S of California

A California Institution With a National Clientele

IN 1871, The Germain Seed and Plant Company was founded in the City of Los Angeles—one of the few pioneer firms in this city that can boast of three quarters of a century of continued progress and expansion. From a small retail store, it has become a National and International institution, shipping its products throughout the United States and to many foreign countries.

Germain's ultra-modern Retail establishment in Los Angeles' downtown business district is among the finest in America. No one should fail to visit it when in Los Angeles.

Branches patterned after the Los Angeles store are located in the following California communities: San Francisco, San Diego, Santa Maria, San Jose, Fresno, Compton, Salinas, El Monte, Watsonville, Sacramento, and Van Nuys and in Phoenix, Ariz.

At our nurseries, many acres of lath and greenhouses are devoted to the culture of orchids, flowering and foliage plants, roses and perennials Thousands of acres in the West are devoted to the production of Germain's seeds, plants and bulbs—and are supervised by men thoroughly trained in the Horticultural profession.

This, perhaps explains why more gardeners all over America are planting Germain's seeds and horticultural products each year.

GERMAIN'S *Tender-Sweet* CORN

Prices are postpaid. Deduct 10c per lb. if shipped otherwise.

Culture

Sweet corn should not be planted until in the spring when all danger of frost is past. The soil preferred is one rich and moist. Plant in hills 18 inches apart with rows 3 feet apart. Three or four seeds may be planted in each hill, but not more than two allowed to stand. As "suckers" or excess shoots appear they should be removed, as they take strength from the mother plant. Whenever the soil presents an appearance of drying, irrigate.

*FILCOAT PROCESS

The Wonder Lawn

★ **Deep, Rich Green All Year** ★ **Chokes Back Bermuda** ★ **Forms Dense Turf**

★ **Requires No Mowing** ★ **Resists Rough Usage** ★ **Thrives in Sun and Shade**

Dichondra is a low-growing American plant, native to the southeastern part of the United States, from Virginia south It is known botanically as Dichondra Repens or D. Repens var. Carolinensis. It makes a dense sod by means of runner-like stems, growing very close to the ground, but never forms a thick mat like Bermuda grass. The kidney-shaped leaves, about one-fourth inch wide, and seldom over 1½ inches in height, have a rich dark velvety-green color. Dichondra is tough in texture and hard usage will not injure the strong turf nor mar its beautiful appearance.

In California and all mild climates dichondra lawns can be started at any time of the year. But as the summer is the best growing season for dichondra, spring or early summer planting gives quickest results. When planting during the colder months, a nurse crop is especially advisable.

In the East or Middle West we recommend spring or early summer planting. This allows sufficient time to develop a strong root system and for the plants to make seed. When the foliage and top growth is hurt by rigorous weather the lawn will then renew itself from the roots and self-sown seeds.

Culture and Care of Tree Roses

IMPORTANT

After planting Tree Roses please be sure to observe the following: Keep top covered with a piece of light burlap or muslin and sprinkle the top twice a day, particularly in sunny weather, until the buds begin to swell and foliage begins to show.

Then handle like any other rose bush.

Also keep plant well watered and tie to a strong stake to eliminate the possibility of breakage due to strong winds.

TITHONIA Torch

TITHONIA "TORCH"

3987 **TORCH**

The top winner in All America Selections for 1951 — the most important flower seed novelty of the year.

And Torch is easy to grow, it grows as easily as a Zinnia—thrives on hot weather. It is orange-red in color and red is the favorite color. It's an excellent cut flower that blooms from August until frost.

Torch is not the old-fashioned Tithonia that you may have seen. It is the result of scientific plant breeding—bred to be early enough for the North; grows about 4½ feet high. All America Selections testify it blooms abundantly everywhere in the U. S.

Torch will be widely talked about next Spring. An easy and disease-free annual—something that thrives on Summer heat. Be sure to plant it.
